**Abstract****SCSI - HANDLING OF I/O SCANS TO MULTIPLE LUNs DURING WRITE/READ  
COMMAND DISCONNECTS**

- 5        There is disclosed a method of handling of I/O scans to multiple logical unit  
numbers used to identify individual peripheral devices on a small computer  
system interface, wherein a peripheral device, upon receiving an inquiry  
command, checks whether a write/read I/O command is outstanding, if a  
write/read I/O command is outstanding, sets a delay flag delaying said peripheral  
10    device for a predetermined period of time; on expiry of said delay time, initiates a  
data transfer with the host device.
